Article triggered PDA google scholar alert. Only mention's Newson's work in relation to how she viewed autism.

Mentions how Newson viewed autism in relation to issues coding (processing or understanding certain aspects of communication) with language, verbal construction.

"Newson et al. (2003) define autism as a profound disorder in which the main role is played by the decay of language coding (or the allocation of the meaning) of any verbal construction"
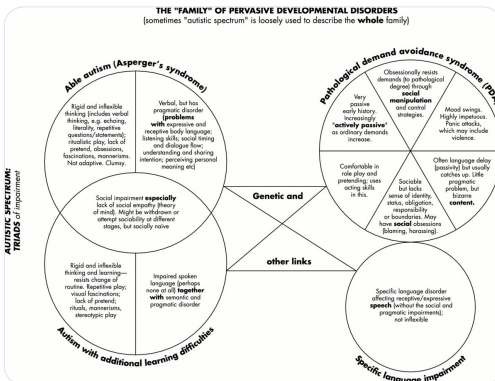

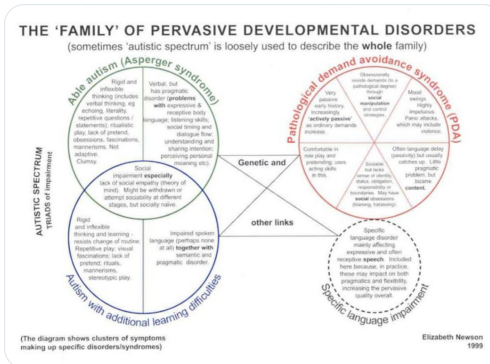

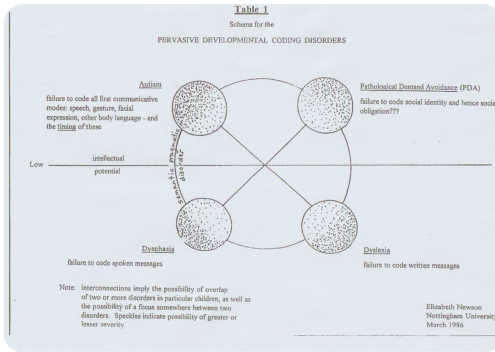

BAZYMA et al 2022, p306.

Which suggests I have been correctly interpreting Newson's views on autism & PDA!

I will take that.

If you want an idea of how Newson viewed autism & PDA being about coding issues, one only needs to look at how her diagnostic groupings for them changed over time.

Please see images below.
First from Newson (1996).
Second from Newson (1999).
Third from Newson et al (2003).

There is no link for me to share with the article.

I will add to my list of PDA literature though.

@threadreaderapp please could unroll?

Thank you in advance.
